

The final Local Working Group (LWG) meeting for the Interreg-MED CAMP-sUmp project was held on Wednesday 2nd May at the IT Services Building on campus. Hosted by the Institute for Climate Change and Sustainable Development (ICCSA), this final meeting brought to a close the CAMP-sUmp project efforts at the local scale where University of Malta students, academics and transport professionals interested in policy, research and analysis in the field of transport attended this informative networking event.

The results and outcomes of the CAMP-sUmp project were outlined and thoroughly explained putting specific emphasis on the local application of the Action Plan, Road Map and an ICT platform framework in order to aid in the implementation and improvement of sustainable mobility plans at the University of Malta.

Locally, the CAMP-sUmp project aimed to increase awareness among decision-makers on the current situation of mobility in and around the university area and this is no more evident than within this final LWG meeting where local stakeholders were provided with figures, statistics and data analysis results from the CAMP-sUmp project on the mobility patterns as well as mobility issues being experienced on campus.

Prospective Sustainable Urban Mobility Plan (SUMP) measures that tackle the aforementioned mobility issues were presented to the attending stakeholders who in turn provided invaluable feedback on these proposed measures.

The Institute for Climate Change and Sustainable Development (ICCSA) would like to extend its sincere gratitude to all attending stakeholders and the Local Working Group for the indispensable feedback and support provided throughout the course of the project and its subsequent stakeholder consultations.
