Mr Lawrence Farrugia graduated with honours in Mechanical Engineering from the University of Malta in 2011. He is currently reading a Master’s degree by research in Mechanical Engineering with the Department of Industrial and Manufacturing Engineering (DIME) at the University of Malta. This research is financed by the Strategic Education Pathways Scholarship (STEPS) programme, which was awarded in October 2011.

The on-going research has the objective to devise a design support tool which will assist engineering designers in the evaluation of design concepts during early phases of product design. The research focuses on the evaluation of interfaces in modular products. Other research interests include: modular product design, multiple-criteria decision-making methods and computer aided engineering design (CAED).
