### Are you familiar with OpenAIRE?

OpenAIRE (**Open Access Infrastructure for Research in Europe**) is a multi-phase project aimed at realising and maintaining the Open Access European scholarly communication data infrastructure, promoting and monitoring Open Access across EU countries, linking the aggregated research publications to the accompanying research and project information, datasets and author information, and empowering Open Science. The project is realized via two major components: a network of dedicated Open Science experts (NOADs) and a web-based platform which harvests research output from connected data providers.

#### OpenAIRE platform

- Operated by the OpenAIRE Consortium
- European-wide scope
- Stats: 26+ million records from 15.293 content providers (as of 30/04/2019)
- Value added services for both individuals and institutions:
  - Personal account
  - Linking of publications
  - Repository register and validator
  - Open Access monitoring

**OAR@UM is one of the content providers for the OpenAIRE platform with over 13,000 Open Access records harvested.**
