#### **INTRODUCTION**

Students in the last year of the three-year Bachelor of Science in Pharmaceutical Technology (Honours) have the opportunity to carry out an eight-week placement at a University of their choice in Europe as part of the Erasmus+ programme. At the end of the placement, students are asked to present a logbook to the home institution with daily entries about activities carried out during their placement and related reflections.

### AIM

To develop and implement a system to maintain regular periodic contact with students to support skills development, assist them with queries and with the compilation of logbooks during the Erasmus+ programme

### **METHOD**

- The number of virtual contacts required was determined according to the length of the placement conducted to ensure that any problems are captured and tackled in time.
- The optimal period to provide feedback about the logbook within a reasonable timeframe was considered so that the student can include any feedback in the following logbook entries.

#### **RESULTS**

- A tutorial was held during and the developed system was explained before the students left to the hosting institution.
- Students were contacted virtually three times, at the beginning, mid-point and one week before the end of the placement (Figure 1).
- Students were contacted by a designated mentor who acted as the contact point with the home institution and answered queries.
- During each contact, students were advised about the date of the following virtual communication and what was required of them.

Pre-Erasmus+ mobility

- Meeting with outbound students
- Explanation of the developed system and logbooks required for the units covered

First virtual contact

- At the beginning of the placement
- Discussed issues related to the experience including accomodation, adjusting to new environment

Second virtual contact

- Mid-point
- Discussed queries or issues
- Students presented up-to-date filled-in logbooks
- Mentor provided students with feedback

Third virtual contact

- Held one week before the end of the placement
- Students presented up-to-date filled-in logbooks
- Students were reminded to acquire required documentation

Figure 1: Information given during the tutorial and virtual contacts

## **DISCUSSION**

The developed and implemented system ensured that regular documented contact is maintained throughout the mobility. Students had a designated mentor to guide them throughout the experience so as to ensure fruitful academic benefit from the mobility.
