

Katerina Busuttil BSc MSc DPhil

Science Journalist and Writer
Oxford.

Personal Profile

Katerina is one of five children born to a Maltese father and British mother.

She spent much of her childhood in Malta and ended up following a BSc in Chemistry and Biology at the University of Malta.

Following that she went to Oxford to read for a D Phil in chemistry where she worked on atomic force microscopy and nanotechnology.

After some more time working in the lab, she took on her present job of science journalism where she reports on nanotechnology for a number of big scientific publishing houses, including Elsevier and AIP.

Katerina is a regular visitor to Malta - she loves seeing her family and despite the long time in the UK, she still speaks good Maltese.

Katerina was a blast during filming – really good fun and a great tour leader round Oxford and its hidden treasures.

Research Profile

Katerina's job is interesting because she gets to travel to many research conferences and meet all the major scientists in her field and then write up reviews of their ongoing work and studies for the rest of the nanotechnology research community.

She also freelances as an editor for some of the same journals and publishing houses.

Other interests

Katerina loves the great outdoors and maintains that in the busy worlds of science and science journalism it is extremely important to find time to relax and have fun with friends. She loves walking by the river in Oxford when she can.
